

MEMORANDUM

TO: Wayne Hedberg, Reclamation Hydrologist
FROM: Thomas L. Portle, Reclamation Soils Specialist
SUBJECT: December 17, 1982 Phone Conversation with Paraho
DATE: December 20, 1982

On Friday, a conference call with Bob Heistand and Linda Limbach of Paraho and Wayne Hedberg and Tom Portle of the Division of Oil, Gas and Mining was held. The purpose was to resolve soil concerns still outstanding following the last volley of correspondence. The results of this call boiled down to commitments made by Paraho for various contingencies. They are as follows:

1. In the event of vegetative failure and/or evidence of erosion, Paraho will reseed and mulch as necessary. If this in turn, is not successful then Paraho will, in consultation with the Division, develop other temporary measures to effect adequate stabilization and protection of the topsoil stockpile.
2. All riprap used to stabilize southern slopes of topsoil stockpiles (or other topsoil slopes, if applicable) must be removed and disposed of separately prior to any redistribution of stored topsoil materials.
3. Although waste rock is to be tested according to the Paraho's Environmental Monitoring Plan we should probably have them commit that regardless of the approval status of the approved plan, Paraho should get with us regarding parameters to be sampled and the development of a sampling schedule.
